Highlights

U.S. coal production in the week ended July 5, 1986, as estimated by the Energy Information Administration, totaled 11.67 million short tons (bituminous coal and lignite, 11.62 million short tons; Pennsylvania anthracite, .05 million short tons). This was 33.3 percent lower than in the previous week (due to the miners' scheduled vacation period) and was 5.2 percent lower than production in the corresponding week of 1985.

Cumulative U.S. coal production from January 1 through July 5, 1986, was estimated at 456.30 million short tons, 0.4 percent above the 454.67 million short tons produced in the comparable period in 1985.

Based on first quarter 1986 production data received by the Energy Information Administration on Form EIA-6, "Coal Distribution Report," the preliminary coal production figures for January through March 1986 have been revised upward from 218.1 million short tons to 229.3 million short tons. The revision stems from increases in producer and distributor stock levels and adjustments to railroad car loadings.

The methodology used to make weekly estimates of coal production was last published in the Weekly Coal Production (DOE/EIA-0218(84/40)), released for publication on October 15, 1984.

Figure 1. Coal Production

Table 1. Coal Production

Production and Carloadings	Week End	
	07/05/86	06/28/86
Production (Thousand Short Tons)		
Bituminous ¹ and Lignite	11,620	17,415
Pennsylvania Anthracite	51	72
U.S. Total	11,671	17,487
Railroad Cars Loaded	76,601	115,220

¹Includes subbituminous coal.

Note: 1985 and 1986 data are preliminary. Total may not round.
